

# Hossein Shakeri

## Full-Stack Developer

+98-914-957-0548

[h.shakeri2001@gmail.com](mailto:h.shakeri2001@gmail.com)

[hosseinshakeri.ir](https://hosseinshakeri.ir)

Full-Stack Developer with 4+ years of experience in **Java Spring Boot**, **microservices**, and **Vue.js**. Delivered real-time financial platforms processing **10K+ events/second**. Excel in **reactive systems**, **DDD security**, and **latency reductions** via multi-threading. Champion clean architecture and modern best practices.

## Skills

---

**Back-end:** Java, Spring Boot, Microservices, Hibernate, REST API

**Database:** PostgreSQL, Elasticsearch, Redis

**Front-end:** Vue.js, Angular, Tailwind, Bootstrap, DevExtreme

**Other:** Git, Docker, Kafka, Artemis Active MQ, CI/CD

## Experience

---

### Zanjiretamin - Iran/Tehran

April 2025 - now

#### Backend developer

- Designed **event-driven** microservices using Apache Kafka, decoupling services and improving asynchronous message reliability.
- Applied Event Sourcing to persist domain state as immutable events, improving auditability and state consistency.
- Applied the **Strategy** pattern to encapsulate business logic, reducing complexity and improving extensibility.
- Built scalable Java/Spring Boot **microservices** supporting **high-traffic**, high-concurrency workloads.
- Optimized **Kafka-based** pipelines and inter-service communication to improve throughput and reduce latency.

### Dornatech - Iran/Tabriz

July 2022 - Jan 2024

#### Backend developer

- Architected **DDD-based RBAC security layer** (Role-Resource-Domain model) in Spring Boot, enabling **context-bound, tenant-specific permissions** for 15+ roles across 30+ bounded contexts, eliminating all misconfigurations.
- Implemented **Elasticsearch search**, cutting latency from **1.8s** to **<200ms** for **50K+ daily queries** at **99.9% uptime**.
- Built **scalable Java microservices** (Spring Boot + Docker), supporting **10K+ concurrent users**.

### BonyanFan - Iran/Tabriz

Feb 2024 - Sep 2025

#### Full-Stack developer

- Built responsive, user-friendly interfaces for a **large-scale** accounting web app.
- Developed **modular** Vue.js components and optimized UI performance.
- Ensured **cross-browser** compatibility and mobile responsiveness using **Bootstrap**.
- Collaborated with product and back-end teams to deliver reliable, scalable features.

# Projects

---

## Financial Market Filter App

- Engineered **real-time financial data platform** with **Vue.js + Tailwind CSS** frontend and **Spring Boot reactive microservices** (Project Reactor), processing **10K+ market events/second** in non-blocking streams.
- Boosted back-end throughput by **65%** using **Spring WebFlux + virtual threads** slashing peak-load latency from **~1.2s to <400ms**
- Architected **Dockerized modular microservices** enabling **zero-downtime deployments** and **auto-scaling** across 3+ nodes.

## Accounting App

- Architected high-performance back-end for web-based accounting system using Spring Boot, Hibernate/JPA and PostgreSQL — powering double-entry ledger, invoicing, inventory management, reconciliations and ACID-compliant transactions.
- Built secure REST APIs with Spring Security + JWT, granular RBAC and full audit logging for compliance.
- Dockerized application for zero-downtime deployments.
- Developed responsive Vue.js + Bootstrap front-end for intuitive financial dashboards.

## Merkato24 - Marketplace

- Architected scalable backend with Java Spring Boot, microservices (Spring Cloud), and REST APIs — supporting public, user, and admin panels (demo: Merkato24.com).
- Built core features: multi-seller catalog, orders, payments, and real-time search/filtering via Elasticsearch + PostgreSQL.
- Delivered high-availability architecture with service discovery, API gateway, and independent scaling.
- Secured with JWT, granular RBAC, audit logging, and optimized search performance.

## Modular Shopping Web App

- Architected modular backend with Java Spring Boot and microservices (Spring Cloud).
- Built secure REST APIs using JWT and granular RBAC (Spring Security).
- Managed data with PostgreSQL and Spring Data JPA for reliable transactions.
- Enabled high availability via service discovery, API gateway, and scalable design.

## X UI panel manager - Monitoring

- Developed centralized management system for 3X UI (Sanaei) panels using Java Spring Boot, enabling unified monitoring, configuration, and real-time health tracking of multiple proxy instances from a single dashboard.
- Implemented secure REST APIs and WebSocket-based live metrics streaming, reducing administrative overhead by 70% and improving incident response time across distributed panel deployments.
- Integrated role-based access control (RBAC) and audit logging, ensuring compliance and operational security in multi-tenant environments.

## RTU Monitoring System

- Developed C++ firmware on ESP32 for RTU-based real-time fuel station monitoring (levels, dispensers, alarms).
- Used SQLite for local persistent storage of telemetry and logs on device.
- Implemented sensor data acquisition, event detection, and reliable offline buffering.

## Automated Bulk Order Execution Bot (ربات سرخطی)

- Built a **high-concurrency** automated order execution system that submits bulk sell/buy orders to brokerage endpoints within a tight, time-constrained execution window.
- Leveraged Java **Virtual Threads** to parallelize order submission, maximizing throughput while minimizing thread-management overhead compared to traditional thread pools.
- Designed the system to reliably dispatch a large volume of concurrent orders to brokerage services under strict timing constraints, ensuring orders are submitted as close to simultaneously as possible.
